

**NEW  
PRODUCT**

## The NEW REDFYRE ELECTRIC

We are proud to announce the introduction of the NEW Redfyre ELECTRIC, a product that we believe to be the ultimate, authentic Electric range cooker on the market. With a host of features, many that are exclusive to Redfyre, the Electric provides you with the following market-leading attributes at very competitive prices:

- Genuine range cooker enamelled cooker casing and quality, being exactly the same as the Redfyre Traditional
- Induction hob option for optimum performance
- Two large range cooker size ovens, but with the ease of a multi-functional fan oven and a multi-functional conventional oven
- Patented Warmfront technology to give that unique range cooker feel of a warm top and front which, uniquely on this cooker, you can control whether it is on or not
- Low running costs, especially when compared to other electric heat store range cookers
- Can be installed anywhere in the kitchen

Fuller details of the features of the new Redfyre Electric include:

### **FLEXIBILITY**

With the ultimate flexibility of a normal, multi-functional electric cooker, the Redfyre Electric can be positioned anywhere in the kitchen: island unit, inside wall, outside wall – as all it needs is a standard 40 amp cooker socket to wire into. No expensive building alterations are needed to create a home for this new range cooker either, plus it's remarkably quick and easy to install in your home. Furthermore, if you have to move, you can even take the Redfyre Electric with you!

### **TRADEMARK RANGE COOKER BODY, DOORS & LIDS**

One of the most appealing features of the Redfyre Electric is that when first seen it looks exactly like a Redfyre Traditional range cooker. There are no control knobs visible to detract from the traditional range cooker look and most component parts, such as the cooker top, hob lids, cooker front and doors are all identical in materials, quality and finish to our Traditional range cookers. To enhance the authentic look, an optional chimney flue pipe can be fitted at the rear. In addition, the sprung loaded lids are even fitted with a micro switch which turns the hob off if they are lowered, thus preventing the hobs being left on – classic design meets modern technology!

### **INDUCTION HOBS...**

Top of the range is the latest induction technology giving you two burners both of which are 2.3kW. These burners automatically adjust to any pan size and only heat the pan when it is placed on the burner. The performance of the induction burners is outstanding with high energy efficiency and response times twice the speed of gas, yet 30% more economical to use.

Our induction hobs have been proven to be phenomenal - much more responsive than even gas hobs! As an example, 2 litres of water heated to 90°C takes 4.46min, whereas with gas it takes 8.46min (BS test results). Cooling of the hob surface is also much quicker with our induction hob, especially when compared to gas, ceramic or cast iron hobs.

### **... OR HIGH LITE ELECTRIC HOBS**

High Lite electric infa red hob providing you with two large burners. High Lite technology gives rapid response in both heating up and cooling down giving enhanced cooking controllability.

Both styles of hob have a single ceramic glass cooking surface with touch sensitive controls making the whole top of the cooker very easy to keep clean. The ceramic glass surface has been designed to have subtle markings to keep the overall look crisp and clean.

## OVENS

The Redfyre Electric is the same size as a Two Oven Redfyre Traditional (700mm deep), and therefore boasts two very large multi-function enamelled ovens with Redfyre's robust wire cooking shelves, stainless steel runners and slam shut doors as standard. The top oven can be used as a grill, fan oven or fan grill, and the bottom oven can be operated as a conventional oven with the top element for browning or bottom element only – giving you a great choice of cooking modes.

## WARMFRONT

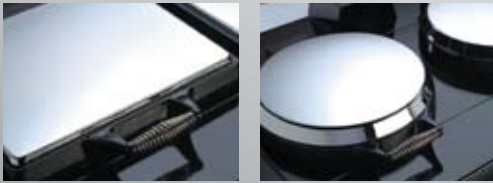

The final innovation developed by Redfyre, and another unique feature of the Redfyre Electric, is its patented\* Warmfront technology. This exclusive system can be turned on at the switch of a button to make the outside of the cooker feel really warm - ensuring your family will gravitate towards the cooker - just like with a traditional range. This energy efficient feature is also highly economical using less than 2p of electricity per hour, meaning you will not have to limit on time.

\* Patent Application No. 0625417.1

## CHOICE OF COLOURS

Available in a choice of 6 beautifully enamelled colours; Black, Claret, Royal Blue, Forest Green, Pewter and County Cream.

## CHOICE OF LIDS

The same beautifully engineered and spring-loaded lids as you would find on a Traditional range cooker, they are available in a choice of highly polished, chrome plated round or square lids.

The looks and feel of a traditional range, yet the responsiveness and the power of a modern culinary appliance, the Redfyre Electric has it all for a VERY competitive price:

The Redfyre Electric with Ceramic Hob  
(round or square lids)..... **£3,395.00** SRP inc VAT

The Redfyre Electric with Induction Hob  
(round or square lids)..... **£3,795.00** SRP inc VAT
